

# Beamer slides for *Linear Algebra*

Jim Hefferon

2020-April-08

If you teach this class using a beamer, a video projector, then you may find useful the slides that I use for that.

<i>File</i>	<i>Description</i>
<a href="#">one_i.pdf</a>	Chapter One, Section I
<a href="#">one_ii.pdf</a>	Section II
<a href="#">one_iii.pdf</a>	Section III
<a href="#">two_i.pdf</a>	Chapter Two, Section I
<a href="#">two_ii.pdf</a>	Section II
<a href="#">two_iii.pdf</a>	Section III
<a href="#">three_i.pdf</a>	Chapter Three, Section I
<a href="#">three_ii.pdf</a>	Section II
<a href="#">three_ii_a.pdf</a>	Geometry of linear maps
<a href="#">three_iii.pdf</a>	Section III
<a href="#">three_iv.pdf</a>	Section IV
<a href="#">three_v.pdf</a>	Section V
<a href="#">three_vi.pdf</a>	Section VI
<a href="#">four_i.pdf</a>	Chapter Four, Section I
<a href="#">four_ii.pdf</a>	Section II
<a href="#">four_iii.pdf</a>	Section III
<a href="#">five_i.pdf</a>	Chapter Five, Section I
<a href="#">five_ii.pdf</a>	Section II
<a href="#">five_ii_a.pdf</a>	Geometry of eigenvectors

Two comments. First, these are compiled from the same source as the book so definitions, etc., should agree exactly. The numbers of theorems, etc., should also agree. However, here I give different examples, so that students see twice as many.

Also, each slide deck comes in three varieties. For instance, in class I use [one\\_i.pdf](#). That omits some proofs in favor of examples. If you want all of the proofs then use [one\\_i\\_allproofs.pdf](#). For printing or for making available on a learning management system, you want to have just full pages, without the mid-slide pauses. For this use [one\\_i\\_handout.pdf](#).
